2.1 Please write your comments, positive and/or negative, that point out specific good or bad features of instruction in this class. Your constructive comments can be helpful to the instructor and to the department in improving the quality of instruction.

Comments
The TA running the class is very helpful and accommodating. My main complaint is with whoever wrote the lab procedures. The procedures are often outdated, confusingly worded, and not applicable to the equipment and methods being employed. While not as often a problem, the length of the protocols sometimes is an issue.
She was very passionate about physics! When lectures fell behind chapters because of exams, she did her best explaining the concepts! She was very patient explaining things, solving them with us, and she was ready when we wanted to check our answers since she solved the lab prior to class.
Alex is very well versed in the material. she explains the material of the day very well and is very fair when coming to the lab results. she allows us to complete the lab through our own merits but is always on standby to be asked any question and to clarify anything that may be read too vaguely.
Alexandra Macedo is a good instructor. She provided a quick lecture before labs which made the lab better. Most of the time, we had to do labs before we learned about them in lecture, and she always took extra time to explain those topics. She seems very knowledgeable and made lab go very smoothly. She also was able to answer any questions we had and she would make sure to really explain things in an easy way for us to understand. Other instructors will tell you just yes, no, or figure it out but she would make sure we understood what we were doing. She was also very patient and helpful. I do wish her quizzes were a bit longer because if you messed up one question, your grade on the quiz was at an 80 already. Other than that, all the quizzes included content we were familiar with and they were very fair. I would recommend this instructor as she was very patient and always made your questions feel welcome.
Really helpful and is always willing to help explain the lab
